AMENDMENTS TO CLAIMS

Please replace all prior versions and listings of claims in the Application with the following Listing of Claims.

Listing of Claims

1. (*Currently Amended*) A method for providing location data of a mobile device using a web service, comprising:

receiving location data <u>at the web service</u> associated with <u>and transmitted by the</u> a mobile device, the mobile device operable to transmit a wireless signal including corresponding location data;

receiving a location request from a client <s>using</s> <u>at the</u> a web service, the location request <s>comprising</s> <u>including</u> information identifying the mobile device and the client;

<u>sending a permission request to the mobile device in response to the received location request; and</u>

<u>providing access to the location data associated with the mobile device based on a response by the mobile device to the permission request.</u>

<s>and</s>

<s>automatically communicating a response to the location request based on the location data associated with the mobile device.</s>

2. (*Original*) The method of Claim 1, the location data comprising a geographic location and a time stamp.

3. (*Original*) The method of Claim 1 further comprising determining request permissions associated with the mobile device based on the identified client.

4. (*Original*) The method of Claim 1, the location request comprising a monitoring request and a criteria for comparing location data.

5. (*Original*) The method of Claim 4 further comprising:

periodically receiving additional location data associated with the mobile device;

2

comparing the received location data associated with the mobile device to the criteria; and

automatically communicating an alert to the client in response to the location data satisfying the criteria.

6.   (*Original*) The method of Claim 5, the criteria comprising the mobile device arriving at a location.

7.   (*Original*) The method of Claim 5, the mobile device comprising a first mobile device, the criteria comprising a determination of a location of the first mobile device within a specified distance of a second mobile device.

8.   (*Original*) The method of Claim 5, the criteria comprising the mobile device crossing a geographic perimeter.

9.   (*Original*) The method of Claim 1, the response comprising a route that the mobile device travels between a first and a second location.

10.   (*Original*) The method of Claim 1, the response comprising a speed that the mobile device travels over a period of time.

11.   (*Canceled*)

12.   (*Currently Amended*) A computer readable medium containing computer-executable instructions ~~Software~~ for providing location data of a mobile device using a web service, the instructions operable when executed on a computing device to: ~~the software operable to:~~

receive location data ~~associated~~ at the web service associated with and transmitted by the ~~a~~ mobile device; ~~, the mobile device operable to transmit a wireless signal encoding corresponding location data;~~

receive a location request from a client ~~using~~ at the ~~a~~ web service, the location request including ~~comprising~~ information identifying the mobile device and the client;

send a permission request to the mobile device in response to the received location request; and

provide access to the location data associated with the mobile device based on a response by the mobile device to the permission request.

~~and~~

~~automatically communicate a response to the location request based on the location data associated with the mobile device.~~

13.   (*Currently Amended*) The computer readable medium ~~software~~ of Claim 12, wherein the location data includes ~~comprising~~ a geographic location and a time stamp.

14.   (*Currently Amended*) The computer readable medium ~~software~~ of Claim 12 further operable to determine request permissions associated with the mobile device based on the identified client.

15.   (*Currently Amended*) The computer readable medium ~~software~~ of Claim 12, the location request comprising a monitoring request and a criteria for comparing location data.

16.   (*Currently Amended*) The computer readable medium ~~software~~ of Claim 15 further operable to:

periodically receive additional location data associated with the mobile device;

compare the received location data associated with the mobile device to the criteria; and

automatically communicate an alert to the client in response to the location data satisfying the criteria.

17.   (*Currently Amended*) The computer readable medium ~~software~~ of Claim 16, the criteria comprising the mobile device arriving at a location.

18.   (***Currently Amended***) The <u>computer readable medium</u> ~~software~~ of Claim 16, the mobile device comprising a first mobile device, the criteria comprising a determination of a location of the first mobile device within a specified distance of a second mobile device.

19.   (***Currently Amended***) The <u>computer readable medium</u> ~~software~~ of Claim 16, the criteria comprising the mobile device crossing a geographic perimeter.

20.   (***Currently Amended***) The <u>computer readable medium</u> ~~software~~ of Claim 12, the response comprising a route that the mobile device travels over a period of time.

21.   (***Currently Amended***) The <u>computer readable medium</u> ~~software~~ of Claim 12, the response comprising a speed that the mobile device travels between a first and a second location.

22.   (***Canceled***)

23.   (***Currently Amended***) A system for providing location data of a mobile device using a web service, comprising:
        memory operable to store information associated with a plurality of network devices in the enterprise network; and
        one or more processors collectively operable to:
                receive location data ~~associated with~~ <u>at the web service associated with and transmitted by the</u> a mobile device, ~~the mobile device operable to transmit a wireless signal including corresponding location data~~;
                receive a location request from a client ~~using~~ <u>at the</u> a web service, the location request <u>including</u> ~~comprising~~ information identifying the mobile device and the client; ~~and~~
                <u>send a permission request to the mobile device in response to the received location request; and</u>

5

provide access to the location data associated with the mobile device based on a response by the mobile device to the permission request.

~~automatically communicate a response to the location request based on the location data associated with the mobile device.~~

24.   (*Original*) The system of Claim 23, the location data comprising a geographic location and a time stamp.

25.   (*Original*) The system of Claim 23, further comprising the processors operable to determine request permissions associated with the mobile device based on the identified client.

26.   (*Original*) The system of Claim 23, the location request comprising a monitoring request and a criteria for comparing location data.

27.   (*Original*) The system of Claim 26, the processors further operable to:
periodically receive additional location data associated with the mobile device;
compare the received location data associated with the mobile device to the criteria; and
automatically communicate an alert to the client in response to the location data satisfying the criteria.

28.   (*Original*) The system of Claim 27, the criteria comprising the mobile device arriving at a location.

29.   (*Original*) The system of Claim 27, the mobile device comprising a first mobile device, the criteria comprising a determination of a location of the first mobile device within a specified distance of a second mobile device.

30.   (*Original*) The system of Claim 27, the criteria comprising the mobile device crossing a geographic perimeter.

31.   (*Original*) The system of Claim 23, the response comprising a route that the mobile device travels over a period of time.

32.   (*Original*) The system of Claim 23, the response comprising a speed that the mobile device travels between a first and a second location.

33.   (*Canceled*)

34.   (*Currently Amended*) A method for providing location data of a mobile device using a web service, comprising:

receiving location data <u>at the web service</u> associated with <u>and transmitted by</u> a plurality of mobile devices, ~~each mobile device operable to transmit a wireless signal encoding corresponding location data,~~ the location data <u>including</u> ~~comprising~~ a geographic location and a time stamp;

receiving a location request from a client ~~using~~ <u>at the</u> a web service, the location request <u>including</u> ~~comprising~~ a monitoring request, criteria, and information identifying the mobile device and the client;

<u>sending a permission request to the mobile device in response to the received location request;</u>

<u>providing access to the location data associated with the mobile device based on a response by the mobile device to the permission request;</u>

~~automatically communicating a response to the location request based on the location data associated with the mobile device;~~

periodically receiving additional location data associated with the mobile device;

comparing the received location data associated with the mobile device to the criteria; and

automatically communicating an alert <u>from the web service</u> to the client in response to the location data satisfying the criteria.
